

Section 10.3 – Technology and the Modern Job Search

Technology is rapidly changing the way people find and apply for jobs. In this section, you'll learn how applicant tracking systems (ATS) are used by employers to review resumes, and how to adjust your application materials to meet those requirements. You'll also explore how tools like ChatGPT and other forms of artificial intelligence can be used responsibly to help write and edit resumes, prepare for interviews, and research potential employers. By understanding how AI fits into the hiring process, you can use it as a helpful tool while still representing your personal experience.

Applicant Tracking Systems

An **Applicant Tracking System (ATS)** is a software that helps companies manage and streamline their recruitment efforts. ATS scans and ranks resumes based on keywords and algorithms. Sometimes, a resume may be scanned by ATS and denied before ever getting in front of someone at the company. Because ATS is used so widely across companies, it is important for you to pay attention to the job description, and include keywords on your resumes to make it past ATS.
